Physics Division

Lawrence Berkeley National Laboratory

## Outline:

- Applications
- Architecture
- System and components
- Technologies
- Cross-linking with other systems

## $\tau^-$ DECAY MODES

$\tau^+$  modes are charge conjugates of the modes below. " $h^\pm$ " stands for  $\pi^\pm$  or  $K^\pm$ . " $e$ " stands for  $e$  or  $\mu$ . "Neutrals" stands for  $\gamma$ 's and/or  $\pi^0$ 's.

Mode	Fraction ( $\Gamma_i/\Gamma$ )	Scale factor/ Confidence level
<b>Modes with one charged particle</b>		
$\Gamma_1$ particle $^- \geq 0$ neutrals $\geq 0 K^0 \nu_\tau$ ("1-prong")	(85.33 $\pm$ 0.08) %	S=1.4
$\Gamma_2$ particle $^- \geq 0$ neutrals $\geq 0 K_L^0 \nu_\tau$	(84.69 $\pm$ 0.09) %	S=1.4
$\Gamma_3$ $\mu^- \bar{\nu}_\mu \nu_\tau$	[a] (17.36 $\pm$ 0.05) %	
$\Gamma_4$ $\mu^- \bar{\nu}_\mu \nu_\tau \gamma$	[b] ( 3.6 $\pm$ 0.4 ) $\times 10^{-3}$	
$\Gamma_5$ $e^- \bar{\nu}_e \nu_\tau$	[a] (17.84 $\pm$ 0.05) %	
$\Gamma_6$ $e^- \bar{\nu}_e \nu_\tau \gamma$	[b] ( 1.75 $\pm$ 0.18) %	
$\Gamma_7$ $h^- \geq 0 K_L^0 \nu_\tau$	(12.14 $\pm$ 0.07) %	S=1.1
$\Gamma_8$ $h^- \nu_\tau$	(11.59 $\pm$ 0.06) %	S=1.1
$\Gamma_9$ $\pi^- \nu_\tau$	[a] (10.90 $\pm$ 0.07) %	S=1.1
$\Gamma_{10}$ $K^- \nu_\tau$	[a] ( 6.91 $\pm$ 0.23 ) $\times 10^{-3}$	
$\Gamma_{11}$ $h^- \geq 1$ neutrals $\nu_\tau$	(37.05 $\pm$ 0.12) %	S=1.3
$\Gamma_{12}$ $h^- \geq 1 \pi^0 \nu_\tau$ (ex. $K^0$ )	(36.51 $\pm$ 0.12) %	S=1.3
$\Gamma_{13}$ $h^- \pi^0 \nu_\tau$	(25.95 $\pm$ 0.10) %	S=1.1
$\Gamma_{14}$ $\pi^- \pi^0 \nu_\tau$	[a] (25.50 $\pm$ 0.10) %	S=1.1
$\Gamma_{15}$ $\pi^- \pi^0$ non- $\rho(770) \nu_\tau$	( 3.0 $\pm$ 3.2 ) $\times 10^{-3}$	
$\Gamma_{16}$ $K^- \pi^0 \nu_\tau$	[a] ( 4.52 $\pm$ 0.27 ) $\times 10^{-3}$	
$\Gamma_{17}$	$\pm 1.5$	
$\Gamma_{18}$	$\pm 1.3$	
$\Gamma_{19}$	$\pm 1.3$	
$\Gamma_{20}$	$\pm 1.3$	
$\Gamma_{21}$	95%	
$\Gamma_{22}$	95%	
$\Gamma_{23}$		
$\Gamma_{24}$ $h^- \geq 3 \pi^0 \nu_\tau$	( 1.33 $\pm$ 0.07) %	S=1.1
$\Gamma_{25}$ $h^- \geq 3 \pi^0 \nu_\tau$ (ex. $K^0$ )	( 1.25 $\pm$ 0.07) %	S=1.1
$\Gamma_{26}$ $h^- 3 \pi^0 \nu_\tau$	( 1.17 $\pm$ 0.08) %	S=1.1
$\Gamma_{27}$ $\pi^- 3 \pi^0 \nu_\tau$ (ex. $K^0$ )	[a] ( 1.04 $\pm$ 0.08) %	S=1.1
$\Gamma_{28}$ $K^- 3 \pi^0 \nu_\tau$ (ex. $K^0, \eta$ )	[a] ( 4.2 $\pm$ 2.1 ) $\times 10^{-4}$	
$\Gamma_{29}$ $h^- 4 \pi^0 \nu_\tau$ (ex. $K^0$ )	( 1.6 $\pm$ 0.4 ) $\times 10^{-3}$	
$\Gamma_{30}$ $h^- 4 \pi^0 \nu_\tau$ (ex. $K^0, \eta$ )	[a] ( 1.0 $\pm$ 0.4 ) $\times 10^{-3}$	
$\Gamma_{31}$ $K^- \geq 0 \pi^0 \geq 0 K^0 \geq 0 \gamma \nu_\tau$	( 1.57 $\pm$ 0.04) %	S=1.1
$\Gamma_{32}$ $K^- \geq 1 (\pi^0 \text{ or } K^0 \text{ or } \gamma) \nu_\tau$	( 8.78 $\pm$ 0.33 ) $\times 10^{-3}$	

- Total of 214  $\tau$  decay modes
- 82 branching fractions determined from constrained fit using 31 basis modes

## 10. ELECTROWEAK MODEL AND C

Revised September 2005 by J. Erler (U. Mexico) and P. Langacker (Univ. of Pennsylvania).

- 10.1 Introduction
- 10.2 Renormalization and radiative corrections
- 10.3 Cross-section and asymmetry formulae
- 10.4 Precision
- 10.5  $W$  and  $Z$

### The Cabibbo Angle and CKM Unitarity

J. Blucher<sup>1</sup> and W.J. Marciano<sup>2</sup>

<sup>1</sup>Institute, The University of Chicago, Chicago, Ill

<sup>2</sup>Brookhaven National Laboratory, Upton, New York 1197

Maskawa (CKM) [1, 2] 3-generation quark m

in parameters ( $\lambda, A, \rho, \eta$ ) [3] nicely illustrates

entral role played by  $\lambda$ .

### The Muon Anomalous I

Andreas Höcker<sup>1</sup> and Will

<sup>1</sup>CERN, CH-1211 Geneva

<sup>2</sup>Brookhaven National Laboratory,

The Dirac equation predicts a muon magnetic m  
ratio  $g_\mu = 2$ . Quantum loop effects lead to a s  
parameterized by the anomalous magnetic momen

$$a_\mu \equiv \frac{g_\mu - 2}{2}$$

## High-Level Requirements and Roadmap for PDG Computing

*Juerg Beringer*  
*Particle Data Group*  
*Lawrence Berkeley National Laboratory*

This document summarizes the high-level requirements for the upgraded PDG computing system and proposes a roadmap for completing the upgrade. It is intended to serve as a starting point for a cost estimate for the completion of the upgrade project.

Draft Version 1.1  
06/01/09

## PDG Product Ordering System Requirements, Design and Work Plan for the Computing Internship of Jacob Andreas

*Juerg Beringer*  
*Particle Data Group*  
*Lawrence Berkeley National Laboratory*

This document summarizes the requirements for the PDG Product Ordering System, discusses some initial design ideas and suggests a work plan for the internship.

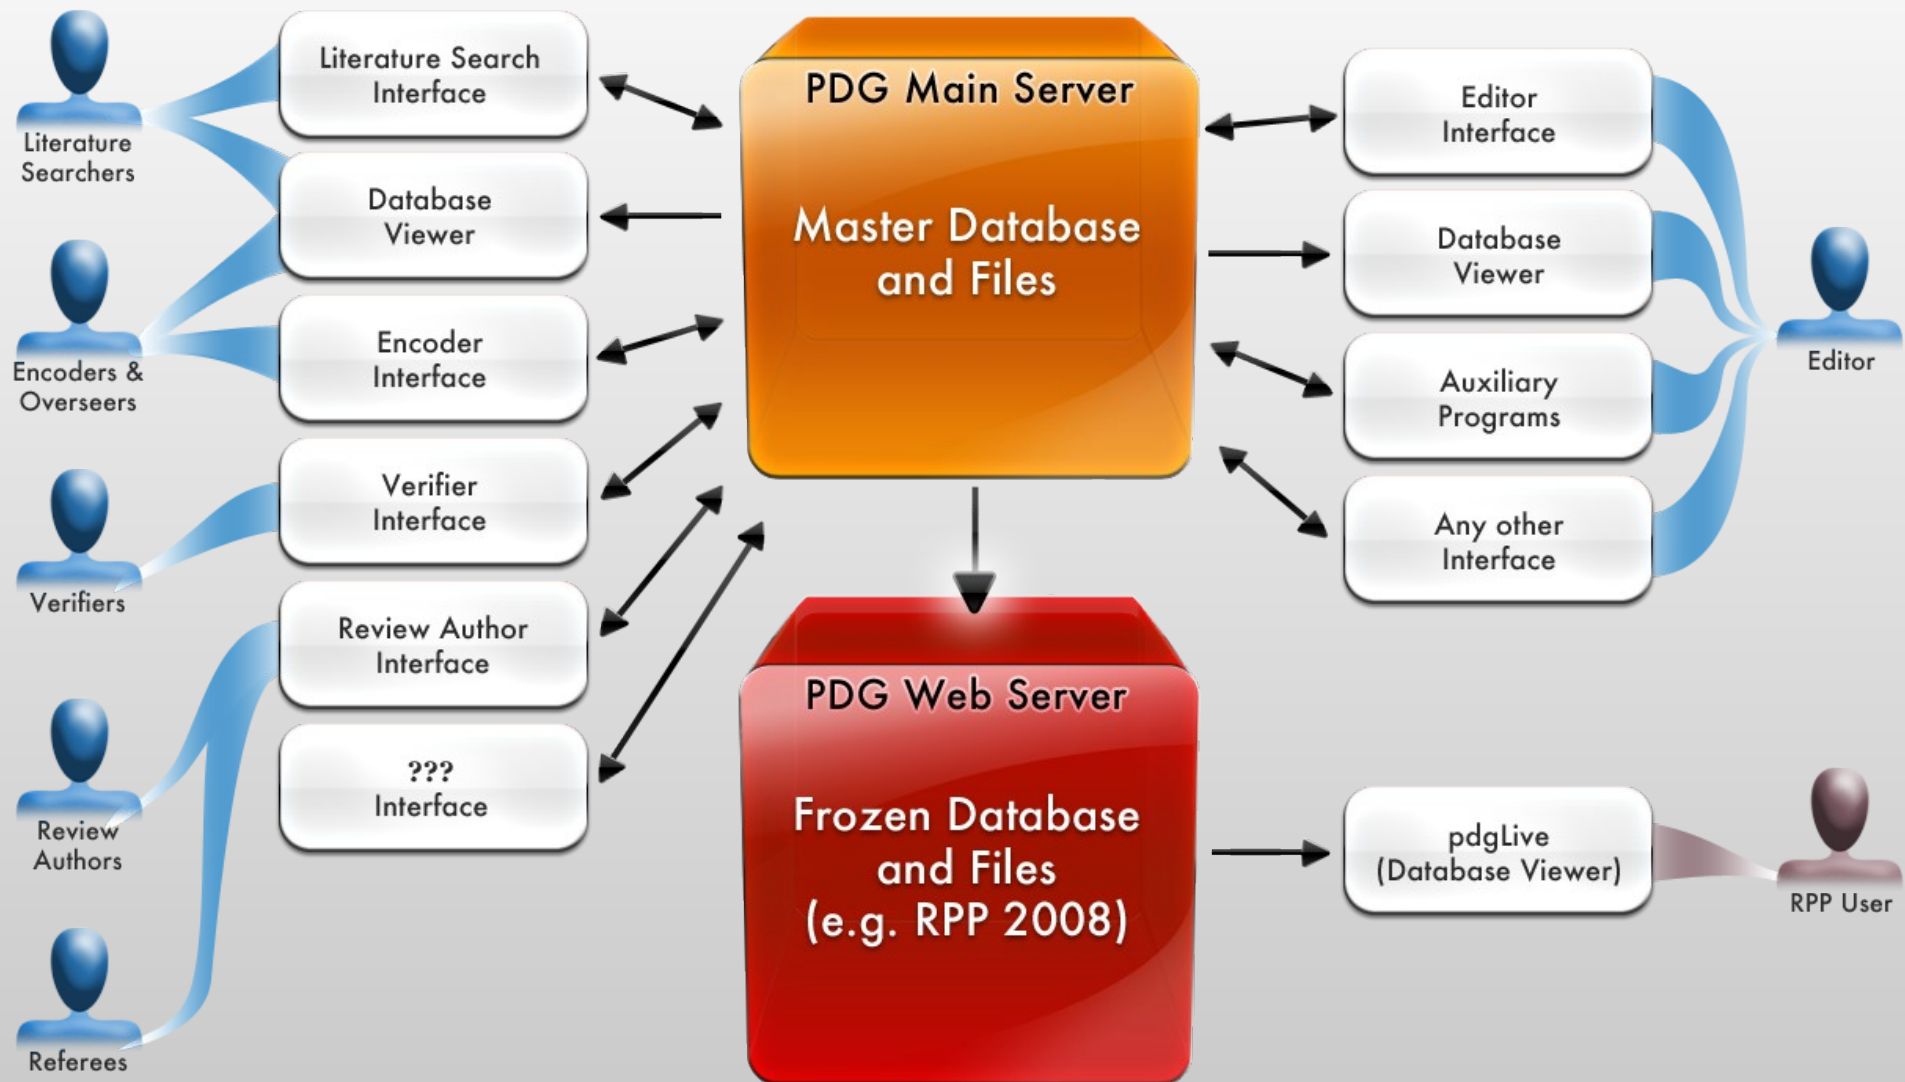

### 1. Introduction and Goal

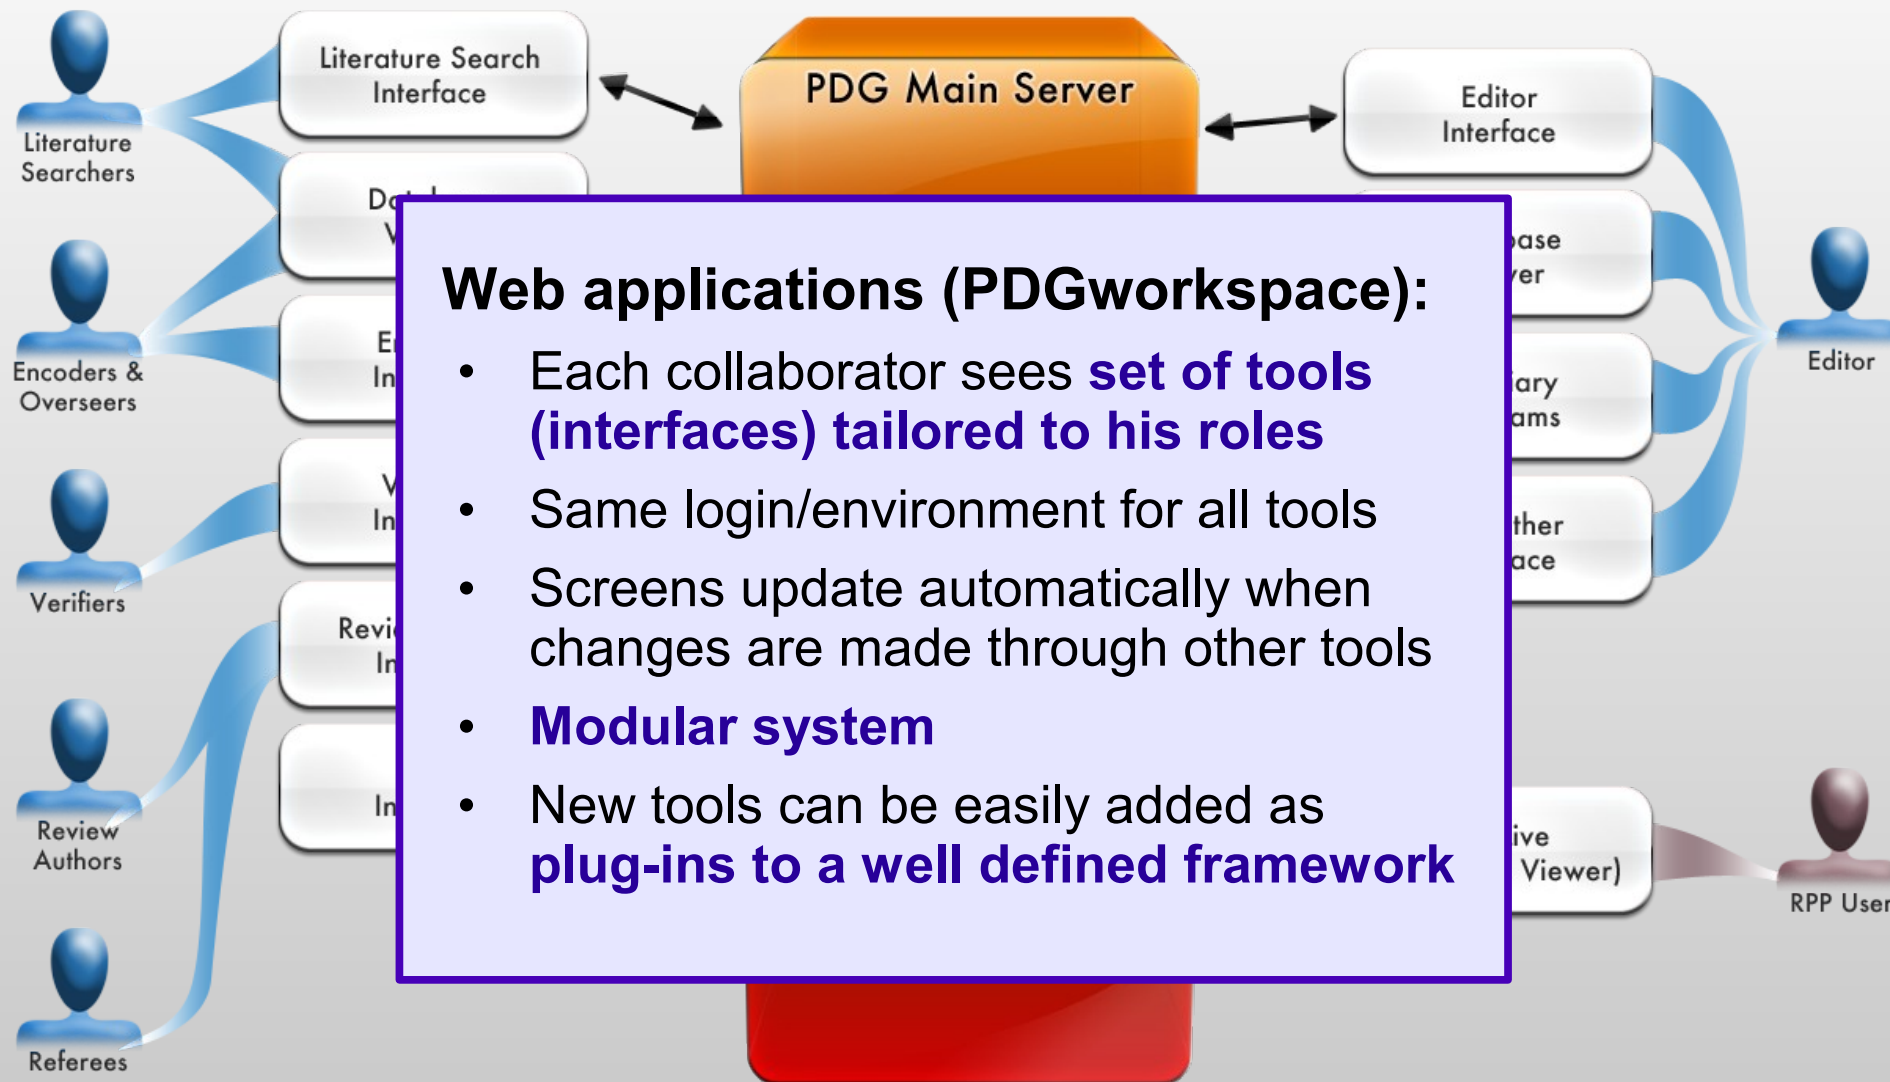

The PDG Product Ordering System allows anybody to request products from the Particle Data Group. These products include the Review of Particle Physics (a 1300+ pages thick book), the Booklet (about 300 pages), and a Pocket Diary. Other products have been available in the past, and may be available in the future. All products are shipped free of charge.

PDG currently distributes 16,000 copies of the big book, 31,000 booklets and 17,000 diaries. About half of these are distributed in Europe by CERN. Most of the big books are shipped directly from the publisher based on address lists we provide at the time the big book is published. This happens every 2 years. Some of the books, booklets and diaries are picked up at LBNL or CERN in person, others are

- **Production quality system – PDG data must be correct**
- **Workflow management**
  - System should keep track of who needs to do what and by when
  - One of the main improvements from new system
- **Task tracking**
  - PDG work generally consists of a set of well-defined tasks
    - Example: add the information from this paper to the Listings
  - System needs to keep track of scientific changes made for each task and ensure **traceability**
    - Changes for single task may happen over course of days, weeks or months, and are usually done by several persons in different UI sessions
- **Support for different output formats**
  - Must separate content from output medium and formatting
  - Implemented starting at database level by using “PDG macros”
  - TeX remains the fundamental format

- **Encoder interface and literature search interface**
  - Future primary data entry interfaces
  - Task driven, easy-to-use tools for non-experts
  - By far our most complex application
  - Contains a large subset of the database viewer
- **Database viewer (pdgLive)**
  - Web-based application for browsing of database contents
  - Dynamically generates web-pages in format similar to RPP book
  - Used both for pdgLive (on published RPP edition),
  - And as tool to inspect new entries during encoding process
  - Provides direct links from RPP entries to SPIRES to actual papers

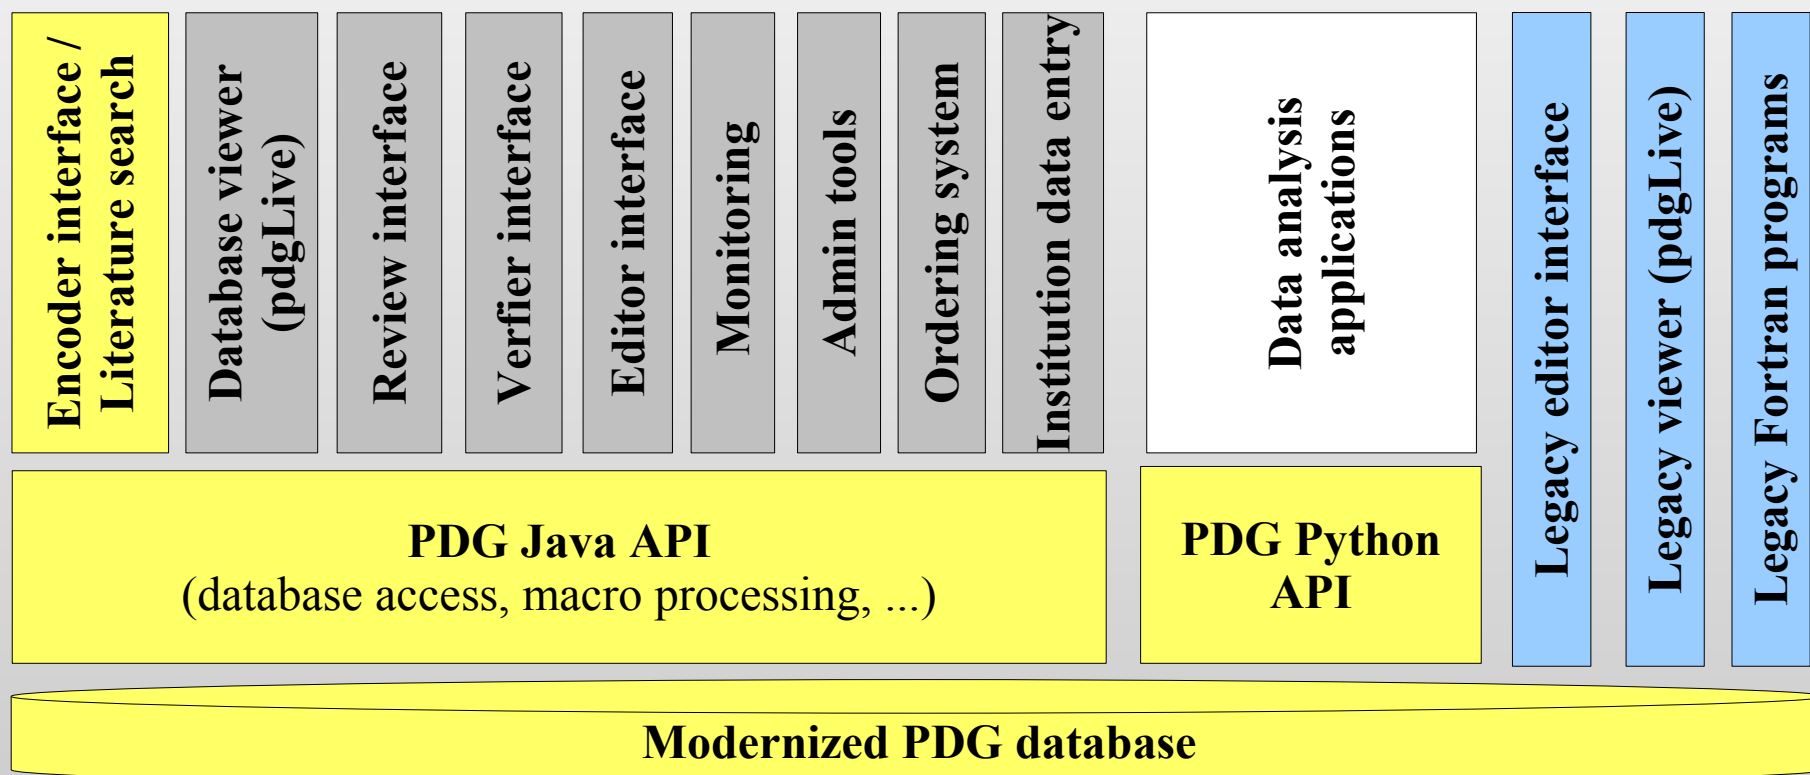

- **Review interface**
  - Keep track of status and responsibilities for each review
  - Manage different versions during authoring and refereeing
- **Verifier interface**
  - Manage verification process and provide web page for verifiers to report their acceptance or corrections
- **Editor interface**
  - Expert-only web-based GUI to edit raw content of PDG database
  - Only used by editor
  - Diminishing role as most data entry tasks will be done decentralized through Encoder Interface
- **Reporting**
  - Reports on progress of Listings & Reviews

- **Admin tools**
  - Configuration tool allows coordinators and editors to define users, assign responsibilities, etc
- **Ordering system, user profile management**
  - Users (including collaborators) can create a profile, order products, and update their address and preferences
  - This functionality is both available as preferences in PDGworkspace and as a separate stand-alone ordering system for the public (with more limited functionality)
- **Interface for updating institution data**

**If needed later, additional applications can be added easily into the PDGworkspace framework**

- **Data analysis environment**
  - Environment with both access to PDG data and to numerical algorithms, data analysis and graphics tools (for example ROOT, GNU Scientific Library (GSL), CERN libraries, ...)
  - Allows interactive access to PDG database
- **Auxiliary programs and scripts**
  - Fitting, averaging, graphics, production of TeX files for Listings
  - Used directly by editor, and indirectly through encoder interface
  - Ultimately based on above data analysis environment
- **System monitoring**
  - Scripts and web pages that alert us as early as possible to problems (e.g. web server down, low disk space, etc.)
- **Mailing system**
  - Interfacing of mailing system (mailman) to PDG database in order to automatically update various mailing lists

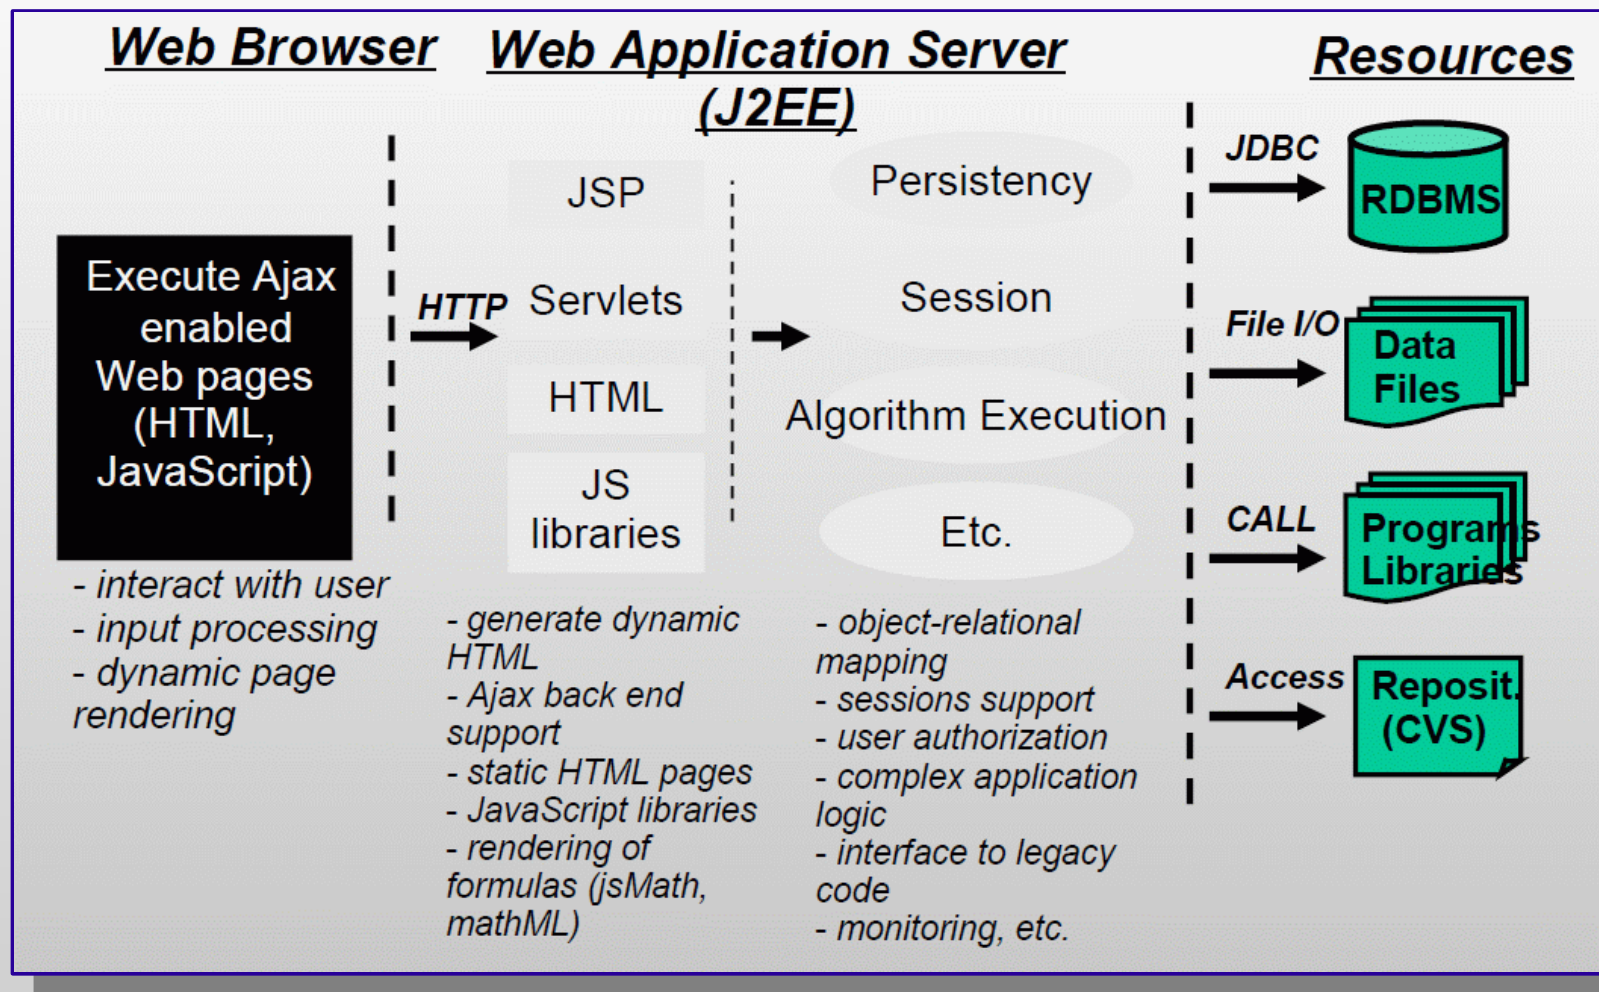

- = updated legacy applications (in V0 release)
- = new components included in V0 release
- = still to be implemented as part of upgrade (some partly done)

**See later talks for more details on some of these components**

- **J2EE-based web application framework**
  - Commonly used industry standard for building scalable, distributed web applications
- **Ajax-enabled web pages**
  - User-friendly and highly interactive GUI behavior
- **Relational database (PostgreSQL)**
  - 130 database tables
- **Programming languages**
  - Java and JSP for web application framework backend
  - JavaScript and CSS for client-side HTML (Ajax)
  - Python API for programmatic access to database and to interface to numerical libraries and tools
  - Legacy Fortran applications restructured as libraries

**Industry-standard way to build professional, highly interactive, maintainable web applications**

- **New modern Linux servers, each with**
  - 2 x Quad Core Opteron (AMD), 2.4GHz, 16GB DDR2 memory
  - 1 or 2 TB of RAID mirrored disk space
- **Redundancy failover scheme for web server**
  - Automatic switchover to backup web server running on pdgprod in case of a problem with PDG web server
  - Will be deployed as part of “pdg1 migration” (see project plan)

- **So far cross-linking between PDG and other systems (e.g. SPIRES/INSPIRE) has been extremely limited**
  - About to change with the new computing system
- **Wish list:**
  - A user looking at an entry in INSPIRE:  
*“What data does PDG have about this?”*
    - Entries in the Listings for related particles or particle properties
    - PDG review articles on related topics
  - A user looking at an entry in PDG:  
*“What are the latest preprints / publications on this topic?”*
  - ...
- **Collaboration with colleagues from INSPIRE (Annette Holtkamp, Kirsten Sachs and others)**

- **Formalized PDG nodes into externally usable PDG Identifiers**

- Strings w/o spaces of the form

[DATABASE::]NODE[:ATTRIBUTE=VALUE[,ATTRIBUTE=VALUE...]]

where

- DATABASE: PDG database/RPP edition (optional)
- **NODE: a PDG node (e.g. S008)**
- ATTRIBUTE, VALUE: additional qualifiers (e.g. decay modes)

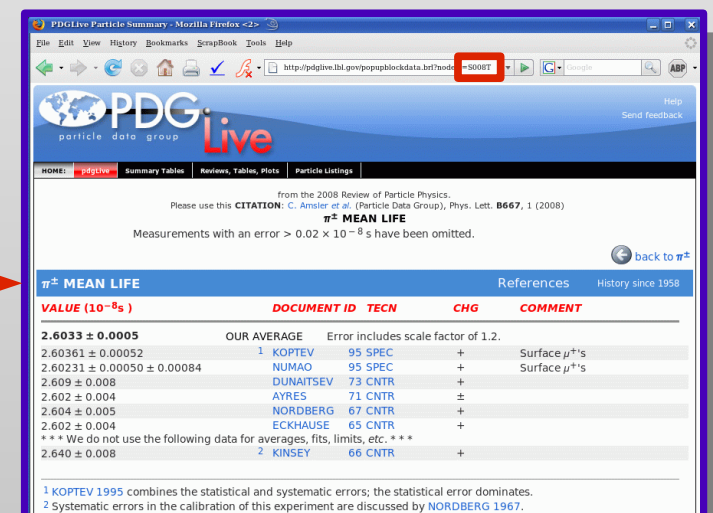

- **Examples:**

- S008 pi+-
- S008M pi+- mass (MeV)
- S008:Desig=1 pi+ --> mu+ nu\_mu

- **Can be used in many ways:**

- Mapping to existing classification
- **Use as “pointers” to PDG data**
- ...

**S008T** →

VALUE (10 <sup>-8</sup> s)	DOCUMENT ID	TECN	CHG	COMMENT
2.6033 ± 0.0005	OUR AVERAGE Error includes scale factor of 1.2.

*** We do not use the following data for averages, fits, limits, etc. ***				
2.640 ± 0.008	<sup>2</sup> KINSEY	66 CNTR	+	

<sup>1</sup> KOPTEV 1995 combines the statistical and systematic errors; the statistical error dominates.  
<sup>2</sup> Systematic errors in the calibration of this experiment are discussed by NORDBERG 1967.

- **Translation table between PDG Identifiers and HEP Taxonomy allows mapping of INSPIRE queries onto PDG data**
  - First results shown at Information Providers Summit IV (2010)

- **Examples:**

```
[PDGitem]
PDGcode = S044W
Description = Z WIDTH (GeV)
Query = "Z0: width"
```

```
[PDGitem]
PDGcode = S044:Desig=1
Description = Z --> e+ e-
Query = "Z0 --> positron electron"
```

```
[PDGitem]
PDGcode = S044Z0T
Description = A**(0,tau)(FB) CHARGE ASYMMETRY IN e+ e- --> tau+ tau-
Query = "electron positron: annihilation" and "tau: pair production"
or "electron positron --> tau+ tau-" and
("charge: asymmetry" or "angular distribution: asymmetry")
```

**Example from mapping being worked out by INSPIRE team at CERN / DESY**

<sup>1</sup> ABBIENDI 2001A error includes approximately 3.6 MeV due to statistics, 1 MeV due to event selection systematics, and 1.3 MeV due to LEP energy uncertainty.  
<sup>2</sup> The error includes 1.2 MeV due to LEP energy uncertainty.  
<sup>3</sup> The error includes 1.3 MeV due to LEP energy uncertainty.  
<sup>4</sup> BARATE 2000C error includes approximately 3.8 MeV due to statistics, 0.9 MeV due to experimental systematics, and 1.3 MeV due to LEP energy uncertainty.  
<sup>5</sup> ABBIENDI 2004G obtain this result using the S-matrix formalism for a combined fit to their cross section and asymmetry data at the Z peak and their data at 130 - authors have corrected the measurement for the 1 MeV shift with respect to the Breit-Wigner fits.  
<sup>6</sup> ACCIARRI 2000Q interpret the s-dependence of the cross sections and lepton forward-backward asymmetries in the framework of the S-matrix formalism. They fit to section and asymmetry data at high energies, using the results of S-matrix fits to Z-peak data (ACCIARRI 2000C) as constraints. The 130 - 189 GeV data constrain interference term. The authors have corrected the measurement for the 0.9 MeV shift with respect to the Breit-Wigner fits.  
<sup>7</sup> ABREU 1996R obtain this value from a study of the interference between initial and final state radiation in the process  $e^+e^- \rightarrow Z \rightarrow \mu^+\mu^-$ .  
<sup>8</sup> ABRAMS 1989B uncertainty includes 50 MeV due to the miniSAM background subtraction error.  
<sup>9</sup> ALBAJAR 1989 result is from a total sample of 33  $Z \rightarrow e^+e^-$  events.  
<sup>10</sup> Quoted values of ANSARI 1987 are from direct fit. Ratio of Z and W production gives either  $\Gamma(Z) < (1.09 \pm 0.07) \times \Gamma(W)$ , CL = 90% or  $\Gamma(Z) = (0.82 \pm 0.19 \pm 0.14)$   
 Assuming Standard-Model value  $\Gamma(W) = 2.65$  GeV then gives  $\Gamma(Z) < 2.89 \pm 0.19$  or  $\pm 2.17 \pm 0.50 \pm 0.16$   
 $-0.37$

PREVIOUS

- Include PDG Identifiers as tags into article metadata
  - Lets INSPIRE point directly to relevant sections of PDG
  - Generated initial set of tags from PDG database
  - Could allow authors to tag their articles using a convenient GUI (similar to pdgLive) to find the relevant identifier

- The new PDG computing system uses a **modern, modular, web-based architecture** and is implemented using **industry-proven technologies**
  - Architecture proven by working V0 system
- A combination of written requirements specifications, existing prototypes and close interaction with PDG **ensures that the system being built does address our needs**
  - The set of components / interfaces being built addresses all aspects of current PDG work
  - Additional components could be easily added later if needed for future PDG work or requested by the HEP community
- The new system allows **far more extensive cross-linking with other systems (such as INSPIRE)**
  - Immutable PDG Identifiers as externally usable pointers to PDG data
  - Collaboration with INSPIRE on cross-linking
  - Other ideas under discussions
